

PROJECT CLOSING REPORT

MarketFlash BI Analysis & Implementation

1. Executive Summary

The MarketFlash BI Project successfully transitioned raw marketing data into a centralized relational database and an interactive Tableau analytics suite. This implementation enables real-time tracking of \$USD revenue, campaign engagement, and executive efficiency, providing a 360-degree view of global marketing performance.

2. Project Accomplishments

- **Data Architecture:** Designed and deployed a Star Schema database featuring 1 Fact table (Campaigns) and 6 Dimension tables.
- **Data Integrity:** Implemented SQL verification scripts to ensure conversion funnels (Views > Clicks > Leads) are logically consistent.
- **Visual Intelligence:** Developed a high-fidelity Tableau Dashboard covering global sales distribution, growth trends, and audience segments.

3. Key Business Insights

North America TOP SALES REGION	Edward Cole TOP EXECUTIVE	Male/Adults KEY AUDIENCE
--	-------------------------------------	------------------------------------

Analysis of the Tableau dashboard reveals a strong growth trend in total sales toward the end of the fiscal year, with significant engagement peaks occurring in the mid-year cycle. Revenue is highly concentrated in North American and Australian markets.

4. Technical Infrastructure

Component	Technology	Status
Database Schema	SQL (Relational)	Verified & Functional
Reporting Layer	Tableau Public	Active
Data Cleaning	SQL Verification Queries	Validated

5. Final Recommendations

- **Expansion:** Scale marketing spend in the "Senior" and "Teen" segments, which currently show lower engagement compared to the "Adult" demographic.
- **Efficiency:** Replicate the campaign strategies used by Top Executives (Cole & Stone) across the wider team to normalize conversion rates.
- **Automation:** Consider moving the raw Excel data sources into a cloud-based SQL environment for automated dashboard refreshes.
